**TRIM★STAK™** components are torturous-path valve trim retrofits for valves from virtually all manufacturers. Our vertically-integrated manufacturing process can duplicate existing trim, plugs and seats at a price and delivery that is **superior to OEM**.

We deliver expertly engineered and manufactured trim that will significantly improve your existing valve performance.

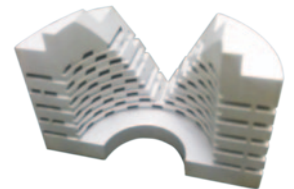

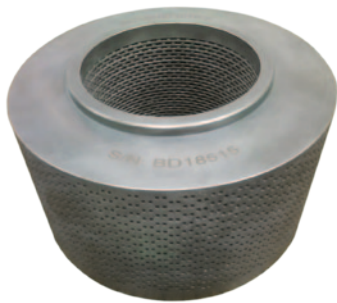

**TRIM★STAK™** trim components are manufactured in a fashion superior to OEM.

Our trim disks are precisely **CNC machined** to exact specifications. Multiple disks are then **brazed together** to form a solid construct.

Carefully chosen alloys and a multi-step finishing process yield a **seamless construction** that far exceeds the trim's operating temperatures.

We can **heat treat** and **precipitation harden** certain alloys to increase toughness and wear characteristics.

### Common Materials Include:

- ♦ 304 Stainless
- ♦ 304 Stainless (Nitrided)
- ♦ 410 Stainless
- ♦ INCONEL® 718
- ♦ Duplex Alloys

Our dealer partners will come to your site and design a trim, plug and seat to work with your existing valve body – and can install them if necessary.

**Contact us today with your requirements!**
